

Plasma Fibroblast Treatment Cleaning Protocol - Salon-Based Business

1. General Salon Hygiene Standards

Before detailing the specific cleaning procedures for Plasma Fibroblast treatments, it is essential to maintain **overall salon cleanliness**:

- Floors, surfaces, and treatment areas must be cleaned and disinfected **daily**.
- Disposable gloves and PPE must be changed between clients.
- A strict **no cross-contamination** policy should be followed.
- All waste must be disposed of in **clinical waste bins**.

2. Pre-Treatment Cleaning Protocol

Prior to the arrival of a client, the treatment area must be thoroughly sanitised. Follow these steps:

Treatment Room Preparation

Surface Disinfection:

- Wipe down all surfaces, including treatment beds, countertops, trolleys, and stools, using a **medical-grade disinfectant** (EN 14476 standard for virus elimination).
- Ensure high-contact areas such as **door handles, light switches, and equipment handles** are cleaned.

Sterilisation of Equipment & Tools:

- The **plasma device probe** should be disinfected using **alcohol wipes** and stored in a sterile container.
- If the device has **detachable tips**, ensure single-use disposable tips are used per client.
- **Non-disposable items** (e.g. Metal needle tips) must be sterilised in an **autoclave**.
- Store sterile tools in a **sealed, disinfected container** until use.

Treatment Bed Preparation:

- Cover the bed with a **fresh disposable sheet** per client.

- If using a reusable cover, it must be **machine-washed at 60°C or above** after each client.
- Use a **disposable pillowcase** or disinfect a reusable pillow before each appointment.

✓ **Hand Hygiene & PPE:**

- Practitioners must wash hands thoroughly with **antibacterial soap and warm water** before wearing gloves.
- Wear a **disposable apron, gloves, and a face mask** (preferably FFP2 or FFP3 for enhanced protection).
- Gloves must be changed **before and after touching each piece of equipment**.

✓ **Client Preparation:**

- Cleanse the client's skin with an **antibacterial wash, chlorhexidine or alcohol wipes**
- Ensure the skin is **fully dry** before beginning treatment.

3. Cleaning Protocol During Treatment

Maintaining cleanliness **throughout the procedure** is critical to prevent contamination.

✓ **Hygienic Handling of Tools & Devices:**

- Use only **sterile disposable tips** on the plasma fibroblast pen.
- Do not touch the plasma pen probe with **unsterilised hands or surfaces**.

✓ **Waste Disposal:**

- **Single-use items** (e.g. gauze, wipes, gloves, disposable tips) must be disposed of **immediately in a clinical waste bin**.
- Keep a **sharps container** available for any needles (if used).

✓ **Avoid Cross-Contamination:**

- Do not place used tools on **clean surfaces**—use a **dedicated contaminated tray**.

✓ **Practitioner Hygiene:**

- Gloves must be changed **if they become contaminated**.
- Do not touch **phones, tablets, or other items** without removing gloves and sanitising hands.

4. Post-Treatment Cleaning Protocol

After completing the treatment, the area must be disinfected thoroughly to maintain salon hygiene.

Disinfection & Sterilisation of Equipment

✓ Plasma Pen:

- Wipe the pen's exterior with an **antibacterial disinfectant wipe**.
- Remove the disposable tip and dispose of it in the **clinical waste bin**.

✓ Surfaces & Tools:

- Clean the treatment bed, trolley, and any surfaces that came into contact with the client using a **hospital-grade disinfectant**.
- Autoclave or disinfect reusable tools (e.g. metal needle tips) before storing them in a sterile pouch.

✓ Floor & Air Cleaning:

- Sweep and mop floors with **disinfectant solution** to remove any particles.
- Use an **air purifier** or ensure **proper ventilation** to minimise airborne contaminants.

✓ Laundry & Waste Disposal:

- Place all used towels, bed covers, and linens in a **separate laundry bag** and wash at **60°C+**.
- Dispose of clinical waste appropriately, following **local council regulations** for hazardous materials.

✓ Practitioner Hygiene Post-Treatment:

- Remove gloves, dispose of them properly, and wash hands with **antibacterial soap**.
- Sanitise any reusable PPE (e.g. face shields) before the next client.

5. Daily & Weekly Cleaning Schedule

Daily Cleaning Tasks

- **✓** Disinfect all surfaces before and after each client.
- **✓** Wipe down plasma fibroblast pen, cables, and other equipment.

- ☒ Change bed covers, towels, and disposable sheets between clients.
- ☒ Remove all clinical waste at the end of the day.

Weekly Deep Cleaning Tasks

- ☒ Deep-clean and disinfect treatment room walls, floors, and all surfaces.
- ☒ Run an **autoclave cycle** to sterilise any non-disposable tools.
- ☒ Check expiry dates on **disinfectants, cleansers and treatment products**.
- ☒ Perform **PPE stock check** and restock gloves, masks, and disposable items.

Cleaning & Hygiene Checklist for Plasma Fibroblast Treatment

♦ Before Treatment

- Disinfect treatment bed, trolley, and surfaces.
- Prepare fresh disposable bed cover and pillowcase.
- Sterilise reusable tools or ensure **single-use items are ready**.
- Cleanse the plasma fibroblast device with alcohol wipes.
- Practitioner to wash hands and wear gloves, apron, and mask.
- Ensure clinical waste bin and sharps container are available.

♦ During Treatment

- Use **new disposable tips** for the plasma pen.
- Avoid touching unclean surfaces while wearing gloves.
- Dispose of contaminated wipes, gauze, and disposable items immediately.
- Change gloves if they become contaminated.
- Maintain a clean and clutter-free workspace.

♦ After Treatment

- Remove and dispose of **used disposable tips** and gloves.
- Wipe down plasma pen, trolley, and treatment bed with **hospital-grade disinfectant**.
- Autoclave or disinfect reusable tools.
- Mop floor and sanitise high-contact surfaces (e.g. door handles).
- Remove all waste from the treatment area and dispose of it appropriately.
- Practitioner to wash hands and sanitise reusable PPE (e.g. face shield).
